**PROGRAMME SPECIFIC OUTCOMES (PSO'S)**

On completion of the B.Sc - Microbiology, the learners should be enriched with knowledge and be able to-

**PSO1:** Articulate and communicate in the specialized terminology pertaining to microbiology.

**PSO2:** Define and explain the theories and practices of the various fields/ disciplines in microbiology.

**PSO3:** Explain the technologies and methods commonly used in microbiology.

**PSO4:** Acquire the requisite skills applicable to microbiological analysis.

**PSO5:** Describe the genetic and ecological relationships between microorganisms.

**PSO6:** Discuss the applications of microorganisms in the various areas of biotechnology.

**Preamble**

The grant of autonomy along with DBT Star funding has provided a platform for designing a curriculum that is dynamic and meets the need of the hour. The inherent freedom under autonomy provides for a multisensory learning experience.

The syllabus is as per the Credit Based Semester and Grading System (CBSGS) and continuous evaluation consisting of components of Internal Assessment and External Assessment. The changes introduced conform to the learning objectives.

Keeping in tune with the progression of the syllabus and maintaining continuity of flow of information from F.Y.B.Sc. and S.Y.B.Sc., the T.Y.B.Sc syllabus has been devised. Several changes are introduced in the year 2019-20 syllabus of the T.Y.B.Sc under autonomy to keep the students up to date with latest developments in the field of Microbiology. Some of the modules of the University syllabus dealing with fundamentals of Microbiology have been retained whilst other modules have been restructured as per the need of learning objectives. In semesters V and VI the learner will learn Advanced Genetics, Virology, Medical Microbiology, Immunology, Microbial Biochemistry and Bioprocess Technology. Some of the interdisciplinary modules such as bioinformatics, recombinant biotechnology, and bioinstrumentation will help the learner to understand the subject from a broader perspective.

All the 8 courses of theory and practicals (Semester-V and Semester-VI together) are compulsory to the students offering microbiology as a single major subject (6 units pattern of the old course). These courses are

1. USMAMB501 and USMAMB601
2. USMAMB502 and USMAMB602
3. USMAMB503 and USMAMB603
4. USMAMB504 and USMAMB604

The syllabus was framed with the critical in-puts from the Board of Study members and the faculty of the Microbiology department.

**SVKM's Mithibai College of Arts, Chauhan Institute of Science & Amrutben Jivanlal College of  
Commerce & Economics (AUTONOMOUS)**

**Evaluation Pattern**

The performance of the learner will be evaluated in two components. The first component will be a Continuous Assessment with a weightage of 25% of total marks per course. The second component will be a Semester end Examination with a weightage of 75% of the total marks per course. The allocation of marks for the Continuous Assessment and Semester end Examinations is as shown below:

**a) Details of Continuous Assessment (CA)**

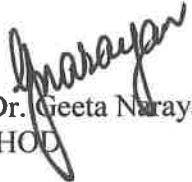

25% of the total marks per course:

Continuous Assessment	Details	Marks
Component 1 (CA-1)	Assignment	15 marks
Component 2 (CA-2)	Class Test	10 marks

**b) Details of Semester End Examination**

75% of the total marks per course. Duration of examination will be two and half hours.

Question Number	Description	Marks	Total Marks
1	Question 1 will be based on module I, question 2 on Module II, question 3 on module III and question 4 on module IV.	A (10 x 1) = 10 marks B = 5 marks	15
2	Each question will be subdivided into two sub-questions "A" and "B". Sub-question "A" will have two questions (of 10 marks each) out of which any one will be attempted. Total marks allotted to sub-question "A" will be 10 marks.	A (10 x 1) = 10 marks B = 5 marks	15
3	Sub-question "B" will be compulsory for 5 marks without internal choice.	A ((10 x 1) = 10 marks B = 5 marks	15
4	It will have questions from all Four modules of the course. It will have 4 questions (of 5 marks each), one from each module, out of which any 3 will be attempted.	A (10 x 1) = 10 marks B = 5 marks	15
5		3 x 5 = 15 marks	15
<b>Total Marks</b>			<b>75</b>

<p><b>Learning Objectives:</b>                      Microbial Genetics is an undergraduate T.Y.B.Sc. Microbiology course that deals with both conceptual and practical tools for generating, processing and understanding biological genetic information. The course involves an understanding of Cell biology, DNA replication, genetic exchange and recombination, mutation and DNA repair. It gives an overview of the branches of genetics and model organisms. Additionally, the learner will be exposed to details of plasmids, transposable elements, basic and advanced virology and basic bioinformatics.</p>				
<p><b>Course Outcomes:</b>                      After completion of the course, learners would be able to:  <b>CO1:</b> Describe the mechanism involved in DNA replication  <b>CO2:</b> Explain regulation of cell cycle, cell signaling and apoptosis  <b>CO3:</b> Apply knowledge about horizontal gene transfer mechanisms for mapping of genes in prokaryotes  <b>CO4:</b> Compare homologous recombination and site-specific recombination among prokaryotes  <b>CO5:</b> Describe the types and causes of mutations in DNA and mechanisms involved in DNA repair</p>				
<b>Outline of Syllabus: (per session plan)</b>

<b>Unit</b>	<b>Topic and Description</b>	<b>No. of lectures 48 minutes/lecture</b>	<b>No. of Credits</b>
<b>Module I</b>	<b>DNA REPLICATION</b>	<b>15 Lectures</b>	<b>2.5</b>
	<b>Historical perspective</b> — conservative, dispersive, semi-conservative, Bidirectional and semi-discontinuous	<b>02</b>	
	<b>Prokaryotic DNA replication</b> – Details of molecular mechanism involved in Initiation, Elongation and Termination	<b>05</b>	
	<b>Enzymes and proteins associated with DNA replication</b> - primase, helicase, topoisomerase, SSB, DNA polymerases, ligases, Ter and Tus proteins	<b>05</b>	
	<b>Eukaryotic DNA replication</b> -- Molecular details of DNA synthesis, replicating the ends of the chromosomes	<b>02</b>	
	<b>Rolling circle mode of replication</b>	<b>01</b>	
<b>Module II</b>	<b>CELL BIOLOGY</b>	<b>15 Lectures</b>	
	<b>Structure of eukaryotic cell</b>	<b>01</b>	
	<b>Cell cycle</b>	<b>04</b>	
	<b>Mitosis and meiosis</b>	<b>03</b>	
	<b>Cell signaling</b>	<b>03</b>	
	<b>Apoptosis</b>	<b>04</b>	

<p><b>Module III</b></p>	<p><b>GENE TRANSFER MECHANISMS IN BACTERIA AND HOMOLOGOUS RECOMBINATION</b></p> <p><b>Transformation</b> Introduction and History Types of transformation in prokaryotes-- Natural transformation in <i>Streptococcus pneumoniae</i>, <i>Haemophilus influenzae</i>, and <i>Bacillus subtilis</i> Mapping of bacterial genes using transformation. Problems based on transformation.</p> <p><b>Conjugation</b> Discovery of conjugation in bacteria Properties of F plasmid/Sex factor The conjugation machinery Hfr strains, their formation and mechanism of conjugation F factor, origin and behavior of F strains, Sexduction. Mapping of bacterial genes using conjugation (Wolman and Jacob experiment). Problems based on conjugation</p> <p><b>Transduction</b> Introduction and discovery Generalised transduction Use of Generalised transduction for mapping genes Specialised transduction Problems based on transduction</p> <p><b>Recombination in bacteria</b> General/Homologous recombination Molecular mechanism Holliday model of recombination Site-specific recombination</p>	<p align="center"><b>15 Lectures</b></p> <p align="center"><b>04</b></p> <p align="center"><b>05</b></p> <p align="center"><b>03</b></p> <p align="center"><b>03</b></p>

<b>Program: B.Sc.</b>			<b>Semester: V</b>	
<b>Course: MEDICAL MICROBIOLOGY AND IMMUNOLOGY: PART-I</b>			<b>Course Code: USMAMB502</b>	
<b>Teaching Scheme</b>			<b>Evaluation Scheme</b>	
<b>Lecture (Hours per week)</b>	<b>Tutorial (Hours per week)</b>	<b>Credit</b>	<b>Continuous Assessment (CA) (Percentage)</b>	<b>End Semester Examinations (ESE) (Percentage)</b>
3.2	-	2.5	25	75
<b>Learning Objectives:</b>				
<p>This course will provide an in-depth exploration of the fields of medical microbiology and immunology that are inexorably linked with each other. The course encompasses the aetiology, transmission, pathogenesis, clinical manifestations, laboratory diagnosis, prophylaxis, and treatment of various diseases that are enlisted in the syllabus. It will also enable the students to appreciate the interplay between the virulence factors of pathogens and the host defence mechanisms.</p> <p>Students of T.Y.B.Sc. Microbiology have had an introductory course on Immunology in S.Y.B.Sc. The present course encompasses efforts to understand how multicellular organisms have evolved to survive a variety of challenges to homeostasis, including infection by pathogens</p>				
<b>Course Outcomes:</b>				
<p>After completion of the course, learners would be able to:</p> <p><b>CO1:</b> Summarize the virulence factors expressed by pathogenic organisms</p> <p><b>CO2:</b> Explain general and specific mechanisms by which an infectious agent causes disease.</p> <p><b>CO3:</b> Review common infectious agents and the diseases that they cause.</p> <p><b>CO4:</b> Evaluate methods used to identify infectious agents in the clinical microbiology lab.</p> <p><b>CO5:</b> Identify the cellular and molecular basis of immune responsiveness</p> <p><b>CO6:</b> Elaborate upon the types of immunoglobulins and the reactions mediated by them</p> <p><b>CO7:</b> Explain the mechanisms of activation of the complement cascade</p> <p><b>CO8:</b> Describe the role of the lymphocytes in the immune response</p>

<b>Learning Objectives:</b>				
<p>This course is designed for T.Y.B.Sc. Microbiology students as an extension of course on introduction to biochemistry in S.Y.B.Sc. With basic information on laws of thermodynamics, its relevance to biological systems, energy transformation and concept of metabolism. In this semester Students are introduced with mechanisms of transport of nutrients &amp; solutes and further in detail catabolism of nutrients in various nutritional categories of microorganisms.</p> <p>They will learn catabolism of simple and complex carbohydrates via different central metabolic pathways. Students will learn detailed mechanism of generation of ATP by substrate level phosphorylation, oxidative and photophosphorylation. Students also learn metabolism of inorganic carbon nitrogen and sulphur.</p>				
<b>Course Outcomes:</b>				
<p>After completion of the course, learners would be able to:</p> <p><b>CO1:</b> Summarize the process of solute transport across the cell.</p> <p><b>CO2:</b> Describe and explain the electron transport chains in prokaryotes and mitochondria as well as the mechanism of ATP synthesis.</p> <p><b>CO3:</b> Explain the mechanism of bioluminescence, its significance and applications.</p> <p><b>CO4:</b> Elaborate upon the mechanism of photosynthesis in prokaryotes.</p> <p><b>CO5:</b> Discuss utilization of simple and complex carbohydrates by central metabolic pathways.</p> <p><b>CO6:</b> Apply the concepts of energetics to the catabolism of carbohydrates.</p> <p><b>CO7:</b> Review utilization of inorganic nitrogen and Sulphur.</p>

<b>Learning Objectives:</b>				
<p>This course on Bioprocess Technology is designed to develop the learner's ability to study the techniques used in the different phases of industrial microbiology such as strain improvement, basic fermentation equipment and its sterilization aspects. It gives an in-depth focus of the different types of fermenters used in the industry for the production of different biomolecules and also emphasizes its process parameters. It includes the principles and describes the main steps and processes in the industrial production of beverages, antibiotics, vitamins, organic acid and enzymes.</p> <p>This course aims to enable graduates to enter industry with an appropriate level of understanding of the need for the requisite science and business aspects to make a viable product and enhance their entrepreneurial skills.</p>				
<b>Course Outcomes:</b>				
<p>After completion of the course, learners would be able to:</p> <p><b>CO1:</b> Apply newer approaches for screening various microbial metabolites</p> <p><b>CO2:</b> Describe the mechanisms of strain improvement and their applications in Industrial Microbiology</p> <p><b>CO3:</b> Describe the design of bioreactors for different applications and its process parameters</p> <p><b>CO4:</b> Design media, growth conditions and techniques for producing and recovering different types of microbial products of commercial value</p>

<b>Unit</b>	<b>Topic and Description</b>	<b>No. of Lectures</b>	<b>No. of Credits</b>
<b>Module I</b>	<b>SCREENING AND IMPROVEMENT OF INDUSTRIALLY IMPORTANT STRAINS</b> <b>Newer approaches for screening microbial metabolites</b>	<b>15 Lectures</b>	<b>2.5</b>
	<b>Strain Improvement of industrial microorganisms</b> Selection of induced mutants Selection of mutants with altered permeability Isolation of mutants not producing Feed Back Inhibitors or Feed Back repressors (All Methods –Only one example) Use of auxotrophs for production of primary metabolites. Example aspartate family. Isolation of mutants that do not recognize the presence of inhibitors and repressors with example(Gradient plate –Lysine) Isolation of auxotrophic mutants example- (Penicillin-Davies technique and Miniaturized tech) Isolation of induced mutants for secondary metabolites. Isolation of resistant mutants Isolation of revertant mutants.	<b>05</b> <b>10</b>	
<b>Module II</b>	<b>UPSTREAM PROCESSING</b>	<b>15 Lectures</b>	
	<b>Inoculum development</b>	<b>05</b>	
	<b>Sterilization</b> Introduction. Media sterilization (Concept of nabla factor) Design of batch sterilization. Methods of batch sterilization- Design of continuous sterilization, Methods– Heat exchanger continuous injector flash cooling Sterilization of fermenter, feeds, liquid waste. Filter sterilization of media. Air sterilization with Absolute filters.	<b>05</b>	
	<b>Solid substrate fermentation</b> Definition Types of substrates used Characteristics of SSF Types of fermenters used for SSF Advantages and disadvantages of SSF	<b>05</b>

<b>Learning Objectives:</b> Microbial Genetics is an undergraduate T.Y.B.Sc. Microbiology course that deals with both conceptual and practical tools for generating, processing and understanding biological genetic information. The course involves an understanding of Cell biology, DNA replication, genetic exchange and recombination, mutation and DNA repair. It gives an overview of the branches of genetics and model organisms. Additionally the learner will be exposed to details of plasmids, transposable elements, basic and advanced virology and basic bioinformatics				
<b>Course Outcomes:</b> After completion of the course, learners would be able to: <b>CO1:</b> Describe the basic concepts and techniques of recombinant DNA technology <b>CO2:</b> Explain the characteristics of model organisms <b>CO3:</b> Describe different types of plasmids; the nature of the transposable elements and mechanism of transposition in prokaryotic cells. <b>CO4:</b> Have acquired hands on skills of isolation of plasmid DNA from bacterial cells and its visualization by performing agarose gel electrophoresis. <b>CO5:</b> Explain the basic concepts of Bioinformatics. <b>CO6:</b> Describe the basic structure, classification, enumeration, cultivation and life cycle of viruses <b>CO7:</b> Categorize various methods used for visualization of viruses <b>CO8:</b> Explain the role of viruses in cancer and diseases caused by prions and viroids <b>CO9:</b> Discuss regulation of lambda phage life cycle

<b>Program: B.Sc,</b>				<b>Semester: VI</b>
<b>Course: MEDICAL MICROBIOLOGY AND IMMUNOLOGY: PART-II</b>				<b>Course Code: USMAMB602</b>
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>
<b>Lecture (Hours per week)</b>	<b>Tutorial (Hours per week)</b>	<b>Credit</b>	<b>Continuous Assessment (CA) (Percentage)</b>	<b>End Semester Examinations (SEE) (Percentage)</b>
3.2	-	2.5	25	75
<p><b>Learning Objectives:</b> This course will provide an in-depth exploration of the fields of medical microbiology and immunology that are inexorably linked with each other. The course encompasses the aetiology, transmission, pathogenesis, clinical manifestations, laboratory diagnosis, prophylaxis, and treatment of various diseases that are enlisted in the syllabus. It will also enable the students to appreciate the interplay between the virulence factors of pathogens and the host defense mechanisms.</p> <p>Students of T.Y.B.Sc. Microbiology have had an introductory course on Immunology in S.Y.B.Sc. The present course encompasses efforts to understand how multicellular organisms have evolved to survive a variety of challenges to homeostasis, including infection by pathogens.</p>				
<p><b>Course Outcomes:</b> After completion of the course, learners would be able to:  <b>CO1:</b> Identify some common infectious agents and the diseases that they cause.  <b>CO2:</b> Evaluate methods used for antimicrobial testing in the clinical microbiology lab  <b>CO3:</b> Describe the modes of action of representative antibiotics  <b>CO4:</b> Review the means by which resistance to antibiotics are acquired by pathogens.  <b>CO5:</b> Appraise the immunological response and how it is triggered and regulated  <b>CO6:</b> Explain the cellular and molecular aspects of lymphocyte activation  <b>CO7:</b> Define the cellular/molecular pathways of humoral/ cell-mediated adaptive responses  <b>CO8:</b> Describe the mechanisms of antigen-antibody reactions and their relevance in disease diagnosis  <b>CO9:</b> Explore strategies for vaccine development</p>

<b>Program: B.Sc.</b>				<b>Semester: VI</b>
<b>Course: MICROBIAL BIOCHEMISTRY: PART-II</b>				<b>Course Code: USMAMB603</b>
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>
<b>Lecture (Hours per week)</b>	<b>Tutorial (Hours per week)</b>	<b>Credit</b>	<b>Continuous Assessment (CA) (Percentage)</b>	<b>End Semester Examinations (ESE) (Percentage)</b>
3.2	-	2.5	25	75
<b>Learning Objectives:</b>				
<p>In semester V students learn utilization of carbohydrates via central metabolic pathways, microorganisms have ability to utilize carbohydrate by fermentation. This semester learner will learn various fermentation mechanism and formation of various fermentation end products by different groups of microorganisms. This knowledge will help the learners understand industrial fermentation products. Carbohydrates are important constituents of cell structures. In this semester learners will learn synthesis of capsule, cell wall which have carbohydrates as major components. In addition to the carbohydrates there are a large number of macromolecules such as lipids, proteins and nucleic acids. which are catabolized by the living cells. Cells also synthesize these macromolecules. With the basic understanding regarding these macromolecules' learner will learn mechanism of catabolism and synthesis of cellular macromolecules. To maintain cell homeostasis all cellular processes are regulated at various level. The learner must be made aware the mechanism of regulation at various level in the living cell. This will not only help in understanding the network of metabolism but also help the learners in process biotechnology.</p>				
<b>Course Outcomes:</b>				
<p>After completion of the course, learners would be able to:</p> <p><b>CO1:</b> Recall microbial physiology including metabolism</p> <p><b>CO2:</b> Describe different types of fermentative metabolism of carbohydrates and will be able to apply this knowledge in process biotechnology</p> <p><b>CO3:</b> Illustrate synthesis of glucose from non-carbohydrate molecules in cell.</p> <p><b>CO4:</b> Elaborate upon biosynthesis of capsule and cell wall.</p> <p><b>CO5:</b> Discuss the metabolism of lipids, aliphatic hydrocarbons, proteins and nucleic acids.</p> <p><b>CO6:</b> Assess regulation of metabolism in bacteria at various levels.</p>				
<b>Outline of Syllabus: (per session plan)</b>

<b>Learning Objectives:</b>				
<p>Bioprocess Technology course is designed to develop the learner's ability to study the techniques used in the different phases of industrial microbiology such as strain improvement, basic fermentation equipment and its sterilization aspects. It gives an in-depth focus of the different types of fermenters used in industry for production of different products, and also emphasizes its process parameters. It includes the principles and describes the main steps and processes in the industrial production of beverages, antibiotics, vitamins, organic acid and enzymes.</p> <p>The learner is expected to learn the need for quality management and regulatory bodies as the products need to fulfill these requirements. Thus, this paper readies the learner to understand and apply the knowledge of fermentation technology and related products.</p> <p>This course aims to enable graduates to enter industry with an appropriate level of understanding of the need for the requisite science and business aspects to make a viable product and enhance their entrepreneurial skills.</p>				
<b>Course Outcomes:</b>				
<p>After completion of the course, learners would be able to:</p> <p><b>CO1:</b> Explain the various steps involved in downstream processing and effluent treatment</p> <p><b>CO2:</b> Design an industrial process keeping in view various guidelines for product recovery and disposal of industrial effluent</p> <p><b>CO3:</b> Appreciate the importance of carbon credits</p> <p><b>CO4:</b> Enlist the applications of enzymes in various fields</p> <p><b>CO5:</b> Design media, growth conditions and techniques for producing and recovering different types of microbial products of commercial value</p> <p><b>CO6:</b> Categorize the different IPs</p> <p><b>CO7:</b> Outline the steps involved in patent application</p> <p><b>CO8:</b> Enlist the salient features of quality management and regulatory procedures</p> <p><b>CO9:</b> Describe the working of important instruments used in biochemical analysis</p>

## **PROGRAMME SPECIFIC OUTCOMES (PSO'S)**

On completion of the B.Sc, the learners should be enriched with knowledge and be able to-

- PSO1:** Articulate and communicate in the specialized terminology pertaining to microbiology.
- PSO2:** Define and explain the theories and practices of the various fields/ disciplines in microbiology.
- PSO3:** Explain the technologies and methods commonly used in microbiology.
- PSO4:** Acquire the requisite skills applicable to microbiological analysis.
- PSO5:** Describe the genetic and ecological relationships between microorganisms.
- PSO6:** Discuss the applications of microorganisms in the various areas of biotechnology.

### **Preamble**

The grant of autonomy along with DBT star funding has provided a platform for designing a curriculum that is dynamic and meets the need of the hour. The inherent freedom under autonomy provides for a multisensory learning experience.

The syllabus is as per Credit Based Semester and Grading System (CBSGS) and continuous evaluation consisting of components of Internal Assessment and External Assessment. The changes introduced conform to the Learning Objectives.

A major advantage of receiving autonomy is freedom to design a need-based curriculum for the learners. An applied component was introduced at the T.Y.B.Sc. level with a view to enhance the skills and for the holistic development of the learner. Keeping this goal in view, the syllabus for 2020-21 has been redrafted to suit the specific requirements of the learners of Mithibai College, Autonomous.

Each semester (Semester V and VI) will consist of one theory and one practical course of 100 marks each.

**SVKM's Mithibai College of Arts, Chauhan Institute of Science & Amrutben  
Jivanlal College of Commerce & Economics (AUTONOMOUS)**

The course is as follows:

Semester V: USMAACMB5: Concepts in Biotechnology

Semester VI: USMAACMB6: Applied Biotechnology

I profusely thank all the committee members for their efforts in drafting the syllabus.

N.B. - (i) The duration of each theory lecture will be of 48 minutes. A course consists of 4 modules. For each module the number of hours allotted are 15. The total number of lectures for each course will thus be 60.

(ii) There will be one practical per batch for each course. The duration of each practical will be 4 lectures. For practical component the value of one credit is equal to 30 learning hours.

(iii) Thus, in a week, a student will study 3.2 hours of theory and 3.2 hours of practicals.

### Evaluation Pattern

The performance of the learner will be evaluated in two components. The first component will be a Continuous Assessment with a weightage of 25% of total marks per course. The second component will be a Semester end Examination with a weightage of 75% of the total marks per course. The allocation of marks for the Continuous Assessment and Semester end Examinations is as shown below:

**a) Details of Continuous Assessment (CA)**

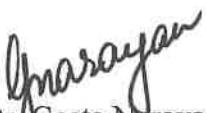

25% of the total marks per course:

Continuous Assessment	Details	Marks
Component 1 (CA-1)	Assignment on topics related to but not included in the course	15 marks
Component 2 (CA-2)	Class test based on the course content	10 marks

**b) Details of Semester End Examination**

75% of the total marks per course. Duration of examination will be two and half hours.

Question Number	Description	Marks	Total Marks
1	Subjective questions based on module 1	3 questions of 7 marks each to be attempted out of 4 questions	21
2	Subjective questions based on module 2	3 questions of 7 marks each to be attempted out of 4 questions	21
3	Subjective questions based on modules 3	3 questions of 7 marks each to be attempted out of 4 questions.	21
4	Objective questions based on modules 1 to 3	4 sub-questions of 3 marks each to be attempted out of 4 questions	12
<b>Total Marks</b>			<b>75</b>

<p><b>Learning Objectives:</b> Concepts in Biotechnology is an undergraduate T.Y.B.Sc. Microbiology course that deals with both conceptual and practical tools for generating, processing and understanding biotechnological information. The course involves an understanding of tools and techniques in biotechnology. In addition, learners will develop life skills required for them to thrive while simultaneously becoming contributing members of society.</p>					
<p><b>Course Outcomes:</b> After completion of the course, learners would be able to:  <b>CO1:</b>List the basic tools and techniques used in biotechnology while simultaneously summarize the concepts behind the same.  <b>CO2:</b>Appreciate the alternatives to chemically harmful fertilizers and pesticides, which include biofertilizers and biopesticides. The learner will also be introduced to Plant Tissue Culture.  <b>CO3:</b>Be introduced to a wide array of applications of Environmental Biotechnology which includes bioremediation methods and the study of biofuels which have a massive implication for today's society.  <b>CO4:</b>Develop holistically and become contributing members of society.</p>

<b>Module</b>	<b>Description</b>				<b>No of Hours</b>
1	Tools and techniques in Biotechnology – Part II				15
2	Introduction to Animal Biotechnology				15
3	Role of biotechnology in society				15
4	Life skills – Part II				15
	<b>Total</b>				<b>60</b>
<b>PRACTICALS</b>					

<p><b>Module 1</b></p>	<p><b>Tools and techniques in Biotechnology– Part II</b></p> <p>DNA sequencing methods: Maxam &amp; Gilbert, Chain termination and automated sequencing.</p> <p>Probes: Significance and methods for probe synthesis and labeling.</p> <p>Blotting Techniques: Southern, Northern and Western blotting.</p> <p><i>In situ</i> Hybridization and FISH.</p> <p>Microarray: Introduction.</p>	<p style="text-align: center;"><b>15 Lectures</b></p> <p style="text-align: center;"><b>03</b></p> <p style="text-align: center;"><b>05</b></p> <p style="text-align: center;"><b>03</b></p> <p style="text-align: center;"><b>02</b></p> <p style="text-align: center;"><b>02</b></p>
<p><b>Module 2</b></p>	<p><b>Introduction to Animal Biotechnology</b></p> <p>Animal cell culture: Principles of mammalian cell culture. Establishment of cell lines (Continuous cell lines). Media and equipment for animal cell culture.</p> <p>Transfection methods, embryonic stem cell transfer, cloning livestock by nuclear transfer, <i>In vitro</i> fertilization and embryo transfer, targeted gene transfer, detection of transgenes.</p> <p>Application of transgenic animals, animal bioreactors.</p>	<p style="text-align: center;"><b>15 Lectures</b></p> <p style="text-align: center;"><b>06</b></p> <p style="text-align: center;"><b>06</b></p> <p style="text-align: center;"><b>03</b></p>
<p><b>Module 3</b></p>	<p><b>Role of biotechnology in society</b></p> <p><b>Social and ethical aspects of Biotechnology:</b> Bioethics, and Bioterrorism. GMOs in the environment.</p> <p><b>Biotechnology in Medicine:</b></p> <p><u>Disease Diagnosis:</u> monoclonal antibodies and detection of genetic diseases.</p> <p><u>Disease treatment:</u> Products from non-recombinant and recombinant organisms, interferons, growth factors, monoclonal antibodies. artificial tissue / organ, gene</p>	<p style="text-align: center;"><b>15 Lectures</b></p> <p style="text-align: center;"><b>08</b></p> <p style="text-align: center;"><b>03</b></p> <p style="text-align: center;"><b>04</b></p>

	therapy, and blood products, drug designing, delivery and targeting.	
<b>Module 4</b>	<p><b>Life skills – Part-II</b></p> <ol style="list-style-type: none"> <li>1. Savings and investment.</li> <li>2. Insurance.</li> <li>3. Coping with stress and workpressures.</li> <li>4. It's okay to say 'NO'.</li> <li>5. Time management.</li> <li>6. Critical thinking.</li> <li>7. Conflict resolution.</li> <li>8. Managing emotions and coping with anger.</li> <li>9. Psycho-sociodevelopment.</li> <li>10. Self-awareness.</li> <li>11. Decisionmaking.</li> <li>12. Assertiveness.</li> <li>13. Emergency situation response.</li> <li>14. Self-confidence and Assertiveness.</li> <li>15. Workplace skills.</li> </ol>	<b>15 Lectures</b>
	<b>Total</b>	<b>60</b>

**SVKM's Mithibai College of Arts, Chauhan Institute of Science & Amrutben  
Jivanlal College of Commerce & Economics (AUTONOMOUS)**

<b>Practical USMAACMBP6</b>		
	<b>Practical (Hours per week)</b>	<b>Credit</b>
	<b>4</b>	<b>2</b>
1	Analysis DNA sequencing chromatogram: a) Sanger's method b) Maxam & Gilbert's method c) Automated sequencing method	
2	Western Blotting Technique.	
3	Case studies for ethical issues in Biotechnology	
4	Animal cell culture (Demonstration).	
5	Visit to a Tissue Culture facility.	
6	Visit to a biotechnology research institute	

**Essential Readings:**

1. *Bernard R. Glick and Jack J. Pasternak*(2002). *Molecular Biotechnology: Principles and Applications of recombinant DNA*. 4<sup>th</sup> Edition.
2. *B. D. Singh*. *Biotechnology*. Kalyani Publishers.
3. *S. N. Jogdand*. *Advances in Biotechnology*. 2005. 5<sup>th</sup> Edition.
4. *S. B. Primrose*. *Modern Biotechnology* 1989. Blackwell Scientific Publ.
5. *Primrose and others*. *Principles of Gene manipulation*. 6<sup>th</sup> edition. 2004 Blackwell Science.
6. *Aluizio Borem, Fabricio R. Santos and David E. Bowen* *Understanding Biotechnology*. 2004 Pearson Education.
7. *James Watson and Others*. *Recombinant DNA*. 2001. Scientific American Books.
8. *S. N. Jogdand*. *Gene Biotechnology*. 2008, Himalaya Pub. House.
9. *Purohit, S. S.* *Biotechnology – Fundamentals and applications*. 4<sup>th</sup> edition, 2005. Agrobios (India).
10. *Jogdand, S. N.* *Medical Biotechnology*, 2008. Himalaya Pub. House (Ebrary).

**Supplementary Readings:**

1. *Das, H.K.* *Textbook of Biotechnology*, 2<sup>nd</sup> edition, 2005. Wiley Dreamtech India Pvt. Ltd.
2. *R.C. Dubey*. *A Textbook of Biotechnology*. 2006 S. Chand and Company Ltd.

*Any other reference sources as recommended by the course instructor.*

*To develop scientific temper and interest by exposure through industrial visits and study/educational tours is recommended in each semester*
